

Note: If you have an item that falls under the Other category due to the item not being listed and you need to calculate the cubic feet of the item. You can do this by multiplying the length, width, and height of the item and then divide by 1728. For example, if you have a large item that measures 72 inches in length, 48 inches in width, and 48 inches in height; $72 \times 48 \times 48 / 1728 = 96$ cubic feet. If you need assistance with this please contact your local transportation office at the base nearest you.
